Powered by FME

Property Interest & Transaction Register

There is a real drive by local and central government to understand their land & property portfolio's. Organisations need to improve information sharing, to curb the inefficiencies, errors, and risks that arise when departments work in isolated data silos. IMGS, working alongside government over the past 24 years', have created a modern, web based, GIS solution, powered by Alto Enterprise from Octave and FME from Safe Software.

This solution is designed to untangle users from non-essential tasks and focus their efforts through highly productive map-based asset management workflows. It boasts configurable forms and workflows, automated alerts for planning encroachment, lease renewals, a detailed reporting portal and departmental & management geospatial dashboards.

Solution Highlights:

- Intuitive User Interface & Guided Workflows
- Detailed Data Capture Forms with Advanced Searches & Filtering
- Modern Tools – Redlining, Buffering, Bookmarks and Boundary Snapping
- Full Asset Life Cycle Management – Leases, Burdens, Acquisitions, Disposals, Current Interest

Core Advantages:

- Cost Effective SaaS Solution
- Deploy Anywhere: On-Premise, Cloud, Hybrid
- Secure, Role Driven Access with Audit Log & Transaction History
- A Single Source of Truth for your Organisation's Land & Property Portfolio
